

Imagine a Neutrino

Neutrinos are tiny particles, but the universe is filled with them. You can't see them, so our cheeky neutrino friends in *I'm a Neutrino* are a fun but unrealistic artist's rendition. Use what you've learned about them to imagine your own version of a neutrino! Is it fuzzy or smooth? What color is it? Draw and color it in the space below.

Imagine Yourself as a Scientist

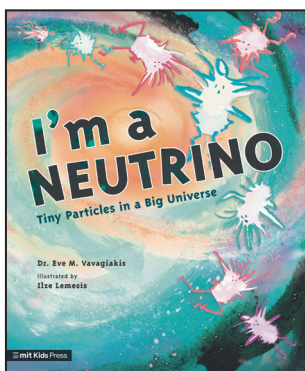

Scientists are people who are curious about the world and who seek to expand our understanding of it. What most interests you? What kind of scientist would you like to be? Here are a few ideas to get you started:

- Are you interested in animals? You could become a biologist or a zoologist.
- Are you interested in making slime and potions? You could become a chemist.
- Are you interested in how the universe is put together? You could become a cosmologist.

Draw yourself below as a scientist.
